

International Economics Development Economics

Academic year 2021-2022

Advanced International Macroeconomics B: International Policy: Constraints, Changing Effectiveness, and New Tools

EI091 - Printemps - 3 ECTS

Course Description

This course provides a graduate-level treatment of policy in international economics, with a focus on recent developments. It first reviews and assesses the drivers of the low level of interest rates in advanced (mostly) economies, as well as the impact of the rising global demand for safe assets. The course then presents the workhorse model of monetary policy design in open economies. It then moves to recent extensions of the model, namely the partial transmission of exchange rates to prices (with a discussion of the dominant role of some currencies), the presence of financial frictions, and the challenge from a lower bound on the interest rate. It proceeds with a review of the evidence of effectiveness of unconventional monetary policies. We then review research on dominant currencies, and the final section offers a discussion of topics that have recently emerged.

The first part of the course consists of lectures. The second part consists of presentations of papers from the reading list (with the option to propose a paper not on the list that you would be particularly interested in presenting).

Syllabus

Evaluation

The evaluation consists of the presentations of a paper from the reading list (40% of grade), a short review of one of the topics (40% of grade) and participation in the classwide discussion (20% of grade).

Each presentation lasts 30 minutes and goes over the main points of the paper. Each student will make one presentation. Preferences should be indicated by the end of the third week, and I will then put together the schedule ensuring an even coverage of topics.

Each student will also write a short review at the end of the course on a topic of her/his choice. The review should be a concise (5-6 pages) discussion of the recent advances in a topic, identifying what has been learnt and what are the remaining challenges. This review can form the basis of the literature review of your MPT or one of your chapters.
