

MASTER IN INTERNATIONAL AFFAIRS
AND MASTER IN DEVELOPMENT STUDIES
SPECIALISATION TRACK

GLOBAL HEALTH

THE
GRADUATE
INSTITUTE
GENEVA

INTERDISCIPLINARY
MASTERS

Global health has emerged as a central concern in development and international affairs. The relationship between health and development is at least threefold: health as an intrinsic societal goal, health as a necessary input for human and economic development, and health as an indicator of a society's progress toward sustainable development. Health is also a fundamental aspect of international affairs: health is a central component of human security, an outcome of global governance processes in and outside the health sector (e.g. security, trade, investment, migration, environment) in an increasingly interdependent world, and a potential threat to international peace and economic stability.

Studying global health also sheds light on broader aspects of development and international affairs: global health has been a site of growing investment, comprising a tenth of the global economy; social and technological experimentation that has generated innovative approaches to addressing public challenges; and an arena filled with a dense network of institutions, states and non-state actors. Although health has traditionally been framed as a medical or technical issue, it is increasingly recognised that protecting global health requires also taking into consideration governance, politics, culture, history, law and economics.

This specialisation cluster will provide students with an understanding of global health, from the "micro" level of individuals and communities, the "meso" level of countries and organisations, to the "macro" level of the global system. This specialisation will train students to analyse and address global health challenges through courses that explore the historical development of global health, its legal and normative frameworks, the actors and policy processes that govern it, and the social and technological developments that drive it.

ELECTIVES

- Apocalypse Then and Now: Advanced Research Seminar in Understanding Systemic Collapse and Adaptation
Susanna Hecht
- Biofinance
Vinh-Kim Nguyen, Nadya Wells, Ryan Patrick Whitacre
- Gender and Bodies in Global Health
Claire Somerville
- Global Governance and Health: Problems, Politics and Policies
Suerie Moon
- Health, Nutrition and Economic Development
Jean-Louis Arcand
- Introduction to Global Health: Problems, Principles, Actors and Practice
Vinh-Kim Nguyen
- Anthropological Perspectives on Reproductive Politics in the 21st Century*
Aditya Bharadwaj
- The Global Health Governance*
Suerie Moon
- Global Health Law*
Gian Luca Burci
- Medical Anthropology I: Health and Illness in Cross Cultural Perspective*
Vinh-Kim Nguyen
- Medical Anthropology II: Contemporary Approaches to Biomedicine, Technology and Global Health*
Aditya Bharadwaj

* Course open in priority to disciplinary programmes.
